

HTML structure

- ☐ Use HTML5 structural elements (header, footer, nav, article, aside, etc.)
- ☐ Select the appropriate tags to add structure to content (p, a, h1, h2, images, etc.)

Use CSS to style the page:

- ☐ Apply fonts, color and styles to elements and the page
- ☐ Demonstrate a correct use of classes and IDs

Layout

- ☐ Use flexbox to create a multi-column layout for at least one part of your site

Animation

- ☐ All buttons and links should include hover effects
- ☐ All hover effects should have a transition

Responsive Design

- ☐ Columns should stack for mobile (or should at least not look broken)
- ☐ If your site has navigation, create a menu for mobile (e.g. a hamburger menu)

Use JavaScript/jQuery to make pages interactive

- ☐ Site includes at least 5 interactions. Examples include:
 - Dropdown or slide out navigation
 - Modal window (or an image lightbox)
 - Carousel (Image slider)
 - Interactions on scroll - content that fades and/or slides in, sticky nav, nav that changes color on scroll
 - Content that appears when the user clicks on a button or tab
 - Form validation
 - Smooth scroll to sections of the page
 - Interactive FAQ section
 - Allow user to filter (show / hide) content by clicking on buttons, checkboxes, tabs, etc.
 - Anything else that requires JavaScript. Take a look at pages on SiteInspire or other sites and see if you can get ideas/inspiration.
